

# E G A L I T E S D E F R A C T I O N S

## D E C I M A L E S

**Consigne :** Complète les égalités de fractions.

Rappel:  $1 = \frac{10}{10} = \frac{100}{100}$

$$3 = \frac{30}{10}$$

$$8 = \frac{80}{10}$$

$$2 = \frac{20}{10}$$

$$9 = \frac{90}{10}$$

$$4 = \frac{40}{10}$$

$$7 = \frac{70}{10}$$

$$5 = \frac{500}{100}$$

$$6 = \frac{60}{10}$$

$$\frac{28}{10} = \frac{280}{100}$$

$$\frac{15}{10} = \frac{150}{100}$$

Si tu trouves cela facile, complète cette ligne :

$$5 = \frac{50}{10} = \frac{500}{100} = \frac{5000}{1000}$$

$$\frac{2300}{1000} = \frac{23}{10}$$

$$\frac{4000}{1000} = \frac{400}{100} = \frac{40}{10} = \dots 4$$

**Consigne :** Colorie les égalités correctes.

$$6 = \frac{60}{100}$$

$$\frac{390}{100} = \frac{39}{100}$$

$$\frac{2}{100} = \frac{20}{100}$$

$$\frac{230}{100} = \frac{23}{10}$$

$$\frac{8}{100} = \frac{80}{10}$$

**Consigne :** Décompose les fractions comme dans l'exemple.

$$\frac{256}{100} = \frac{200}{100} + \frac{50}{100} + \frac{6}{100} = 2 + \frac{5}{10} + \frac{6}{100}$$

$$\frac{375}{100} = \frac{300}{100} + \frac{70}{100} + \frac{5}{100} = 3 + \frac{7}{10} + \frac{5}{100}$$

$$\frac{864}{100} = \frac{800}{100} + \frac{60}{100} + \frac{4}{100} = 8 + \frac{6}{10} + \frac{4}{100}$$

$$\frac{912}{100} = \frac{900}{100} + \frac{10}{100} + \frac{2}{100} = 9 + \frac{1}{10} + \frac{2}{100}$$

$$\frac{459}{100} = \frac{400}{100} + \frac{50}{100} + \frac{9}{100} = 4 + \frac{5}{10} + \frac{9}{100}$$

Si tu y arrives, alors recompose cette fraction :  $4 + \frac{7}{10} + \frac{3}{100} = \frac{473}{100}$
